Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein. Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It can also act synergistically with interferon gamma to C;Comment: TNF-alpha and -beta (lymphotoxin) are products of different genes closely ut are produced by different cell types and have different induction kinetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7,7391. "2.8 A resolution crystal structure of human TRAIL, a cytokine with
selective antitumor activity.";
Immunity 11:253-261(1999).
IFFORTION: Cytokine that binds to TNFRSF10A/TRAILR1,
TNFRSF10B/TRAILR2, TNFRSF10C/TRAILR3, TNFRSF10B/TRAILR4 and
possibly also to TNFRSF11B/OFG. Induces apoptosis. Its activity
may be modulated by binding to the decoy receptors
TNFRSF10C/TRAILR3, TNFRSF10D/TRAILR4 and TNFRSF11B/OFG that cannot
induce another and TNFRSF11B/OFG that cannot

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61
                                                                                                                                                                                                                                                                                                                      "Evidence that the rat osteopetrotic mutation toothless (tl) is not in the TNRSF11 (TRANCE, RANKL, ODF, OPGL) gene.";

Int. J. Dev. Biol. 45:853-859(2001).

Int. J. Dev. Biol. As a second to the second to the rate of the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral hypercalcemia of malignancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               10 PSLGQTCVLIVIFTVLLQSLCVAVTYVYFTNELKOMODKYSKSGIACF----LKED---

    similarity).
    TISSUS SPECIFICITY: Highly expressed in thymus and bone tissues.
    PTM: The soluble form derives from the membrane form by proteolytic processing (By similarity).
    SIMILARITY: Belongs to the tumor necrosis factor family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SÜBUNIT: HOmotrimer (By similarity). alveolar mammary structures during pregnancy, resulting in death of newborns. Trance-deficient mice show severe osteopetrosis, with no osteoclasts, marrow spaces, or tooth eruption, and exhibit profound growth retardation at several skeletal sites, including the limbs, skull, and vertebrae and have marked chondrodysplasia, with thick, irregular growth plates and a relative increase in hypertrophic chondrocytes. SIMILARITY: Belongs to the tumor necrosis factor family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SSEEMGSGPGVPHEGPLHPAPSAPAPAPPPA -> TP (in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumor necrosis factor ligand superfamily member 11, membrane form.
Tumor necrosis factor ligand superfamily member 11, soluble form.

TISSUE SPECIFICITY: Highest in the peripheral lymph nodes, weak in spleen, peripheral blood Leukocytes, bone marrow, heart, placenta, skeletal muscle, stomach and thyroid.
INDUCTION: Up-regulated by T cell receptor stimulation.
PTM: The soluble form of isoform 1 derives from the membrane form by proteolytic processing (By similarity). The cleavage may be
                                                                                                                                                                                                                                Nagai M., Kyakumoto S., Sato N.;

"Cancer cells responsible for humoral hypercalcemia express mRNA encoding a secreted form of ODF/TRANCE that induces osteoclast formation."

Biochem. Biophys. Res. Commun. 269:532-536(2000).

-! FUNCTION. Cytokine that binds to TNRRSFIIB/OPG and to TNRRSFIIA/ANK. OSteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and may play a role in the regulation of the T cell-dependent immune response. May also play an important role in enhanced bone-resorption in humoral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        hypercalcemia of malignancy.
SUBUNIT: Homotrimer (By similarity).
SUBCELULIAR LOCATION: Type II membrane protein (isoforms 1 and 3), secreted (isoform 2). A soluble form of isoform 1 arises by proteolytic processing (By similarity).

Tumor necrosis factor ligand superfamily member 11, soluble form (By similarity).

Signal-anchor for type II membrane protein (Potential).

Extracellular (Potential).

Extracellular (Potential).

N-linked (GLNAc. .) (Potential).

N-linked (GLNAc. .) (Potential).

Missing (In isoform 3).

It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation - the European Bioinformatics Institute. There are no restrictions on its FUNCTION: Cytokine that binds to TWFRSF6/FAS, a receptor that transduces the apoptotic signal into cells. May be involved in cytotoxic T cell mediated apoptosis and in T cell development. TWFRSF6/FAS-mediated apoptosis and in T cell development. TWFRSF6/FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T cells, or both. Binding to the decoy receptor TWFRSF6B/DCR3 modulates its effects (By similarity).

SUBCELLULAR LOCATION: Type II membrane protein (isoform FASL);
Secreted (isoforms FASL and FASLS). [3]
SEQUENCE FROM N.A. (ISOFORM FASL).

(Potential).
Missing (in isoform FasLS).
/FTId=VSP_006445.
T -> A (in gtrain BALB/c, strain DBA/l and strain DBA/2; enhances cytotoxicity).
E -> G (in strain BALB/c, strain DBA/l and strain DBA/2; enhances cytotoxicity).
F -> L (in gld; abolishes binding of FASL to its receptor).

Tennomic Cytokine that binds to TNFRSF6/FAS, a receptor that

Transduces the apoptotic signal into cells. May be involved in

Cytotoxic T cell mediated apoptosis and in T cell development.

TNFRSF6/FAS-mediated apoptosis may have a role in the induction of

Deripheral tolerance, in the antigen-stimulated suicide of mature

To cells, or both. Binding to the decoy receptor TNFRSF6/DCR3

modulates its effects (By similarity).

Collected (By similarity).

                                                             A novel cytokine (AAW19777), designated Apo-2 ligand, induces mammalian cell apoptosis. It is belived to be a member of the tumour necrosis factor cytokine family. Its amino acid sequence was deduced from a cDNA clone (AAT72796) isolated from a human placental cDNA library. Apo-2 ligand polypeptides, esp. those corresponding to amino acids 114-281, 41-281, 15-281 or 1-281 of Apo-2 ligand, can be produced by culturing cells transformed or transfected with a vector contg. Apo-2 ligand nucleic acid. They can be used to induce apoptosis in mammals and to treat pathological conditions such as cancer (esp. breast or colon cancer) or to raise antibodies useful in diagnostic assays

AIM-I). AIM-I is a member of the tumour necrosis factor (TNF) ligand superfamily. The products can be used in the diagnosis and treatment of disorders related to under-expression, over-expression or altered capression of AIM-I. AIM-I or agonists can be used for treating autoimmunoproliferative disease lymphadenopathy (TRL), rheumatosus, immunoproliferative disease lymphadenopathy (TRL), rheumatoid arthritis, diabetes, and multiple sclenosis, graft versus host disease, to inhibit neoplasis auch as tumour cell growth, to treat restenosis, to requlate neoplasis in endothelial cell development, to stimulate peripheral colerance and cytocoxic T-cell mediated apoptosis. Antagonists can be used for treating cachexia, cerebral malaria, rheumatoid arthritis or osteoporosis, for preventing graft-host rejection, and as anti-inflammatory agents, for treating endotoxic shock or to prevent

inflammation, arthritis, septicaemia, autoimmune disease, restenosis, transplant rejection, infection, ischaemia; brain injury; bone disease; acute respiratory disease syndrome, acquired autoimmune disease syndrome; AIDS; cancer; atherosclerosis; Alzheimers disease; TRAIL; TNF; TL2. tumour necrosis factor-related apoptosis-inducing ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the human tumour necrosis factor (TNF)-related receptor, TL2 (also known as tumour necrosis factor-related apoptosis-inducing ligand, TRAIL). This protein is used in a method resulting in the isolation of the novel human TNF related receptor, TR6. TR6 polypeptides and polymucleotides can be used in the treatment of chronic and acute inflammation, arthritis, septicaemia, autoimmune disease (e.g. inflammatory bowel disease, isochaemia, autoimmune disease (e.g. inflammatory bowel disease, isochaemia, acute respiratory disease syndrome, restenois, brain injury, (acquired autoimmune disease syndrome, bone disease, cancer (e.g. lympho-proliferative disease), atherosclerosis and Alzheimere disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  61 DDSYMDPNDEESMNSPCWQVXWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8 'S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human tumour necrosis factor related apoptosis inducing ligand (TRAIL) (AAM19787) is a novel cytokine that induces apoptosis of certain target cells, including cancer cells and virally infected cells. Its amino acid sequence was deduced from cDNA clone HuAIC (AAT72848), deposited in vector pDC409 as ATCC 69849. Recombinant TRAIL polypeptides (esp. soluble polypeptides) can be expressed in host cells and used in the treatment of cancer (e.g. leukaemia, lymphoma and melanoma) and viral infections, or to raise antibodies that may be useful for treating thrombotic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DDSYMDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The present sequence represents human AGP-1. AGP-1 is a tumour-necrosis factor (TNF)-related protein, involved in inflammation, myelopoiesis and bone resobretion. It has the same nucleic acid and amino acid (aa) sequences as the TNF-related apoptosis-induced ligand (TRAIL) described in Immunity, 3 (1995) 673. Antibodies (Ab) are used as immunoassay reagents for detecting AGP-1 expression. Nucleic acid complementary to AGP-1 is used to regulate AGP-1 expression and antagonistic compounds are used to treat inflammation (e.g. rheumatoid arthritis, systemic lupus used to treat inflammation (e.g. rheumatoid arthritis, systemic lupus or the accorption diseases (e.g. osteoporosis, osteomyelitis, chematopoietic diseases associated with reduction in the number of bone marrow cells, particularly neutrophils and lymphocytes, e.g. where caused by disease, injury or exposure to myelosuppressive agents. Host cells, transformed with expression vectors containing AGP-1 DNA, are used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This represents a human tumour necrosis factor related apoptosis ligand (TRAIL) polypeptide. The human and murine TRAIL polypeptides can induce apoptosis of Jurkat cells. The encoding nucleic acid sequences are useful for producing the recombinant TRAIL polypeptides, which may be useful in studies of apoptosis, to purify leukaemia, lymphoma or melanoma cells (e.g. to isolate antigens for vaccine development). The polypeptides can be used to treat leukaemia, lymphoma or melanoma (e.g. by extracorporeal treatment of blood or bone-marrow), or to treat viral infections

The polypeptides can be used in treatment of neurodegenerative disease. The polypeptides can rhuematoid arthritis, and SEP. The polypeptides are apoptotic in central nervous system cells, antigenic and specifically recognise the surface receptor of the TRAIL protein. The polypeptide is a marker of disease and anti-TRAIL antibody or a TRAIL equivalent that binds to specific at receptors, inhibiting formation of natural complex

This sequence represents a novel human cytokine, designated Apo-2 ligand (Apo-2L). The Apo-2L polypeptide can be produced by standard recombinant methodology. Apo-2L is useful for inducting apoptosis in mammalian cancer cells. This is useful for the treatment of cancer. Apo-2L can be used to induce apoptosis for pathological conditions characterized by decreased levels of apoptosis, e.g. autoimmune disorders like lupus and immunemainted glomerular nephritis and cancer. Apo-2L and its nucleic acid coding sequence can also be used in quantitative and screening diagnostic techniques. Anti-Apo-2L antibodies can be used for treating diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The hybridoma cell lines are deposited under the American Type Culture Collection Accession Numbers: ATCC HB-12256, HB-12257, HB-12258 and HB-12259. The Apo-2 ligand antibodies may be used in diagnostic assays for Apo-2 ligand, e.g. detecting its expression in specific cells, tissues, or serum. The antibodies may also be employed as therapeutics. For instance, anti-Apo-2 ligand antibodies which block Apo-2 ligand activity, like Apo-2 ligand antibodies which block Apo-2 ligand activity, are also useful for the affinity purification of Apo-2 ligand from recombinant cell culture or natural sources. They are also useful for the affinity purification of Apo-2 ligand from recombinant cell culture or natural sources. The Apo-2 ligand itself may be used to treat diseases e.g. cancer, by inducing apoptosis in cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated monoclonal antibodies having antigen specificity for Apo-2 ligand, e.g. 2G6, 2E11 or 5C2, useful for detecting the expression of Apo -2 ligand serum, and for treating diseases associated with increased

The present invention describes an antibody that binds to a human protein (I) selected from: PRO381; PRO1269; PRO1410; PRO1755; PRO1780; PRO3434; PRO357; PRO1597; PRO1597; PRO1597; PRO1597; PRO1595; PRO1096; PRO2098; and PRO2262. (I) has anticancer activity and can be used to diagnose tumours in mammals, by detecting complex formation when the antibody is contacted with test cells. Increased expression of genes encoding (I) can also be detected to
                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibodies specific for PRO polypeptides, used to diagnose and inhibit the growth of tumors in mammals, and to identify inhibitors of PRO polypeptide activity or expression.
                                                                                                                                                                                                                                                                                                                                                                    M.

diagnose tumours. Agents which inhibit the activity of (I), especially the antibodies, or an antisense oligonucleotide which hybridises to genes encoding (I), can be used to inhibit tumour growth, preferably by inducing cell death. Methods from the present invention can be used to identify compounds which inhibit the biological activity of (I). AACS8019 to AACS8102 represent PCR primers and hybridisation probes used in examples from the present invention for human PRO sequences. AACS8013 to AACS8122 and AABZ4021 to AABZ4040 represent human PRO polymucleotide and protein sequences given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                           DDSYWDDNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The present sequence represents a human TRAIL (tumour necrosis factor (TNF) related apoptosis-inducting ligand) polymeptide. The specification describes a method for enhanced killing of tumour cells. The method comprises contacting a susceptible tumour cell with a synergistic mixture of a TRAIL receptor ligand and a diterpenoid triepoxide in a combined dosage to kill at least 50 % of the cells. This mixture is synergistic, and so is active at lower doses and against otherwise resistant cell lines. The method is used for killing tumour cells, especially solid tumours or carcinomas (especially mammary carcinoma or non-small cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

The present sequence is human AGP-1, a type II transmembrane protein. Fusion proteins comprising an Fc immunoglobulin region fused to the Nerminal portion of the AGP-1 protein have been produced. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-induced disorders. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodaficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AGP-1 containing fusion proteins used in prior art therapies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        61 DDSYMDPNDEESMNSPCWQVKWQLKQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120

The PRO polypeptides and their agonists, including antibodies, peptides, and amall molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        69

```
The invention relates to a cytokine designated as tumour necrosis factor (TNF) related apoptosis inducing ligand (TRAIL), which induces apoptosis of certain target calls, including cancer calls and virally infected cells. The TRAIL polypeptides are useful in killing cancer calls, in treating viral infections (e.g. bovine viral diarrhoea or human immunodeficiency virus (HTV)) and cancers (e.g. leukaemia, lymphoma and melanoma), as a research reagent useful in studying apoptosis including the regulation of programmed cell death. TRAIL DNA sequences may be employed in developing a gene therapy approach to treating disorders mediated by defective or insufficient amounts of TRAIL, in the production of TRAIL polypeptides and as probes or primers in polymerase chain reactions (PCR). The present sequence is human TRAIL protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New tumor necrosis factor related apoptosis inducing ligand polypeptides for treating viral infections (e.g. bovine viral diarrhea or human immunodeficiency virus), or cancers (e.g. leukemia or lymphoma).
                                Human; tumour necrosis factor; TNF; cytokine; cytostatic; virucide; TNF related apoptosis inducing ligand; TRAIL; cancer; viral infection; human immunodeficiency virus; HIV; leukaemia; gene therapy; lymphoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1 MAMMEVQGGPSLGGTCVLIVIFTVLLQSLCVAVTYVYFTNELKQMQDKYSKSGIACFLKE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DDSYMDPNDEESMNSPCWQVKWQLRQLVRKMILRTSEETISTVQEKQQNISPLVRERGPQ 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to a formulation comprising Apo-2 ligand and divalent metal ions. Apo-2 ligand and the formulation are useful for treating cancers and viral infections. Addition of divalent metal ions for making Apo-2 ligand and formulations containing Apo-2 ligand results in increased yield and stability of Apo-2 ligand trimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of divalent metal ions for making Apo-2 ligand and in formulations containing Apo-2 ligand for increasing yield and stability of ligand trimers, useful for therapeutic applications.

Patent No. US2002055624A1

GENERAL INFORMATION:
APPLICANT: Wiley, Steven R.
TITLE OF INVENTION: TNF-DELTA LIGAND AND USES THEREOF
FILE REPRENCE: 6255.US.02
CURRENT APPLICATION NUMBER: 05/09/193,663

CURRENT FILING DATE: 1998-11-17

SEALLER APPLICATION NUMBER: 60/065,916

EARLIER APPLICATION NUMBER: 60/065,916

SALUER FILING DATE: 1997-11-17

NUMBER OF SEQ ID NOS: 10

SOFTWARE: FastSEQ for Windows Version 3.0
